

Revised Design: Swipe Buddies

Calendar UI:

We took into consideration the feedback we had on the calendar. The calendar will be styled to have weekly and monthly views. Additionally, when users are selecting times for availability, its drag selection. Users can specify which location through checkboxes, and for more specificity pick locations by time slot as well.

User Matching:

A concern with our original design was privacy. What if a user does not want to get matched with their friend?

We decided that receivers confirm their selection first. When users have not confirm, the giver does not know if they have matched. It is only when the receiver accepts, does the giver know of their status and the name of the receiver. This way, if matched with a friend the receiver identity is not immediately revealed.

Confirmation:

Receivers must confirm by 6 pm, the day before their meetup. This allows them to change plans without affecting their reputation.
